QUESTION: The scope of work includes abandonment of the potable well and all monitoring wells. What is the depth of the potable well?

Answer: A search of well construction reports was completed for the site. There is no report for the onsite potable well. Its depth is unknown.

Based on review of well construction reports for potable wells in the area, depths range from 70 to 170 feet below ground surface (bgs) with most cased to 40 feet bgs. Depth to water in the wells ranges from 15 to 25 feet bgs.
